DFI	2%
TOKABU	45%
50501	.29%
EDEN	77.70%
CIRUS	77.59%

⚠ **Note:** Extreme moves (>100%) are typically micro-cap tokens with very low liquidity. Exercise caution — these are not suitable for most investors.

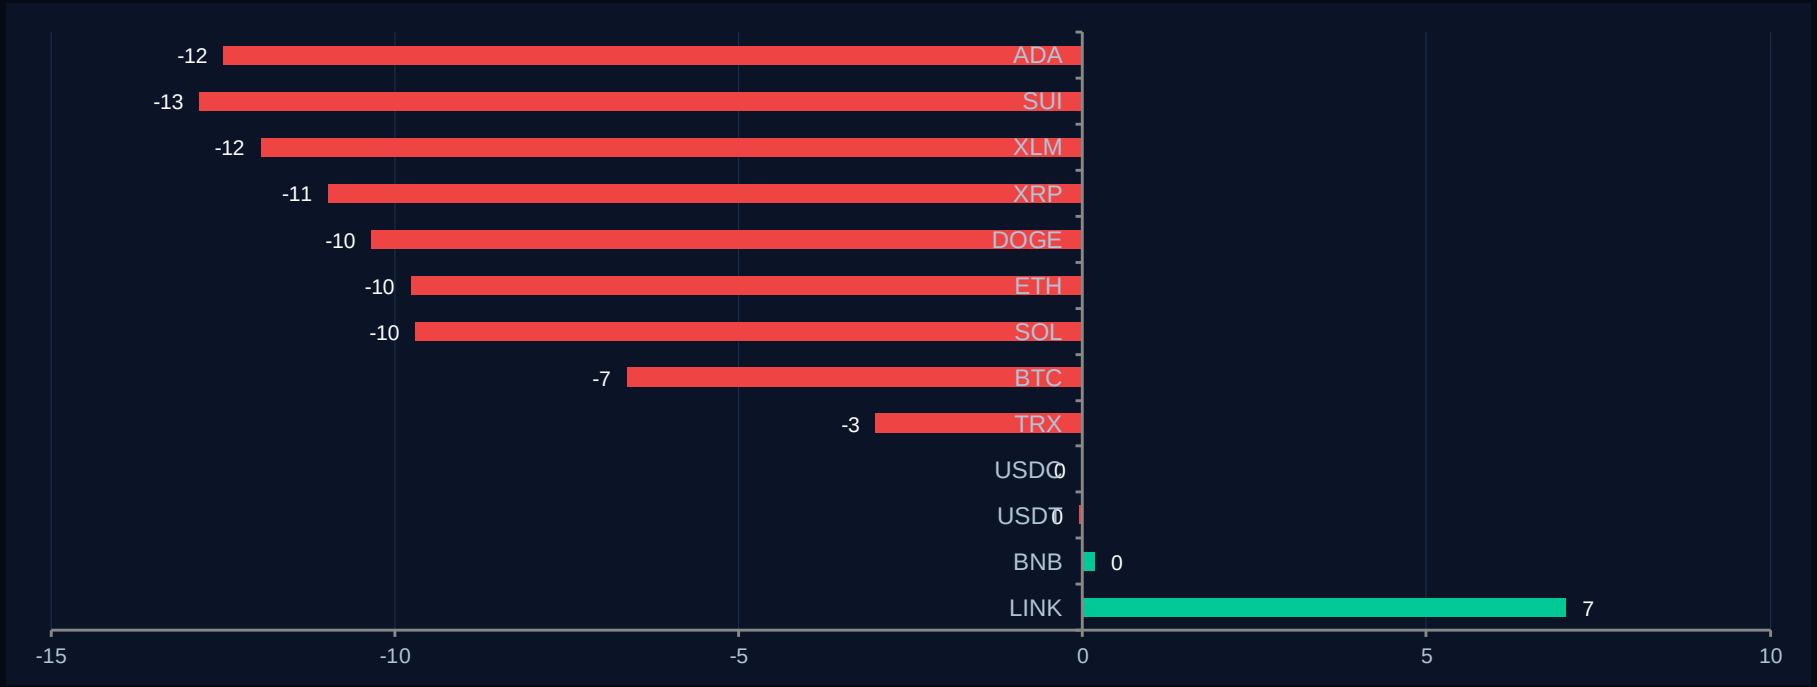
> VOLUME ANALYSIS | 24h Trading Volume Leaders

Where is the Money Moving? — Top Volume Coins

Total 24h Volume (Top 8): $298.65B — Stablecoins (USDT+USDC+DAI+FDUSD) account for **$172.17B (57.7%)** of all volume, reflecting heavy use as trading pairs.

> 7-DAY PERFORMANCE | Weekly Return Comparison

Weekly Price Change — Major Cryptocurrencies

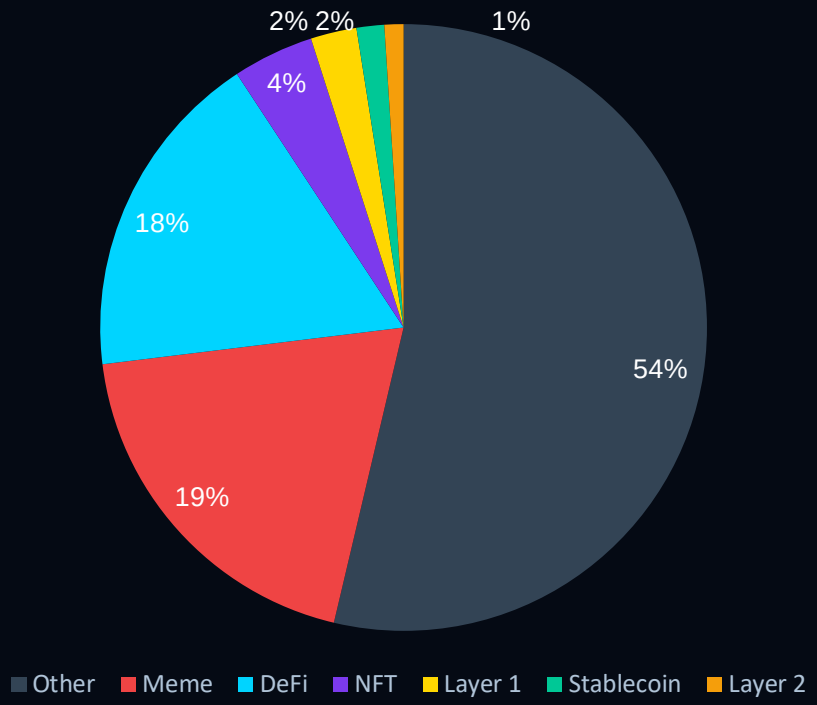


WEEKLY MARKET CONTEXT

Only LINK (+7.03%) and BNB (+0.18%) posted positive 7-day returns among major coins. Most large-cap assets declined 6–13% over the week, suggesting a **bearish short-term trend**. Stablecoins (USDT/USDC) held their peg as expected.

> ECOSYSTEM BREAKDOWN | Coins by Category

5,023 Coins Categorised by Ecosystem Type



Meme Coins — **973 coins**
19.4% of total | Driven by social media trends & hype cycles

DeFi — **888 coins**
17.7% of total | Decentralised exchanges, lending, yield farming

NFT & Gaming — **217 coins**
4.3% of total | Digital art, collectibles, play-to-earn tokens

Layer 1 — **123 coins**
2.4% of total | Base blockchains: BTC, ETH, SOL, ADA and peers

Stablecoins — **74 coins**
1.5% of total | Pegged to USD or other fiat currencies

Layer 2 — **51 coins**
1.0% of total | Scaling solutions built on top of L1 chains

> KEY INSIGHTS | What the Data Tells Us

Data-Driven Findings from the Market Snapshot

01 BTC Holds Commanding Market Control

Bitcoin's 58.60% market dominance means it controls more than half of the entire crypto market. At $113,743 per coin and $2.26T market cap, BTC remains the single most important asset in the ecosystem by a massive margin.

02 Most Major Coins Down Over 7 Days

All large-cap coins except LINK (+7%) and BNB (+0.2%) posted negative 7-day returns, with many falling 10–13%. This broad-based decline signals a short-term bearish correction despite individual daily gains in the session.

03 Meme Coins Dominate Token Count

Meme coins represent 19.4% of all tracked coins (973 tokens) — second only to uncategorized "Other" tokens. This reflects speculative retail activity. However, their market cap share remains negligible vs. Layer 1 assets.

04 Stablecoins Drive Trading Volume

USDT alone accounts for $124B of the $352B total 24h volume — 35.2% of all trades. Combined with USDC, DAI and FDUSD, stablecoins represent 57.7% of all trading volume, confirming their role as the backbone of crypto liquidity.

05 Extreme Volatility in Micro-Cap Tokens

Some tokens moved over 3,000% in 24 hours (BRM) while others lost 95%+ (PORT). This extreme volatility is characteristic of micro-cap tokens with tiny liquidity pools — not reflective of the broader market's actual health.

06 Ethereum Gaining Ground vs. Bitcoin

ETH posted the strongest 24h gain among top coins (+2.72%), while BTC was nearly flat (+0.05%). With ETH's 13.44% dominance and a $4,302 price, institutional interest in Ethereum's DeFi ecosystem appears to be strengthening.

> RECOMMENDATIONS | Strategic Actions for Investors & Analysts

Data-Backed Actions Based on the Market Analysis

1 Prioritise BTC & ETH as Core Holdings

With BTC at 58.6% market dominance and ETH showing strong 24h momentum (+2.72%), blue-chip exposure should form the foundation of any portfolio. These assets offer better liquidity, transparency and long-term track record than altcoins.

2 Avoid Chasing Extreme 24h Gains

Tokens like BRM (+3,085%) or SNAKES (+683%) are micro-cap assets with negligible liquidity. Such moves are unsustainable and often precede sharp reversals. Investors should avoid FOMO-driven entries into low-cap tokens.

3 Monitor the 7-Day Correction for Entry Signals

The broad 7-day decline across ADA (-12.5%), XRP (-11%), SOL (-9.7%) and ETH (-9.8%) may represent accumulation opportunities for long-term investors. Watch for stabilisation before building positions.

4 Use Stablecoins Strategically During Volatility

With avg daily volatility at 6.64% and most coins declining weekly, holding a portion of capital in USDT or USDC allows investors to capitalise on dips without full exposure to market swings.

5 Track LINK as a Potential Sector Leader

Chainlink (+7.03% weekly) was the only major coin to post meaningful positive 7-day performance. This outperformance in a declining market may signal underlying institutional demand worth monitoring.

6 Apply Risk Tiers to Portfolio Construction

Structure portfolios across three tiers: Tier 1 (BTC/ETH – stability), Tier 2 (BNB/SOL/XRP – growth), and Tier 3 (DeFi/L1 altcoins – speculative). Avoid meme coins exceeding 5% of total allocation.

Thank You
